

Black-eared Seedeater

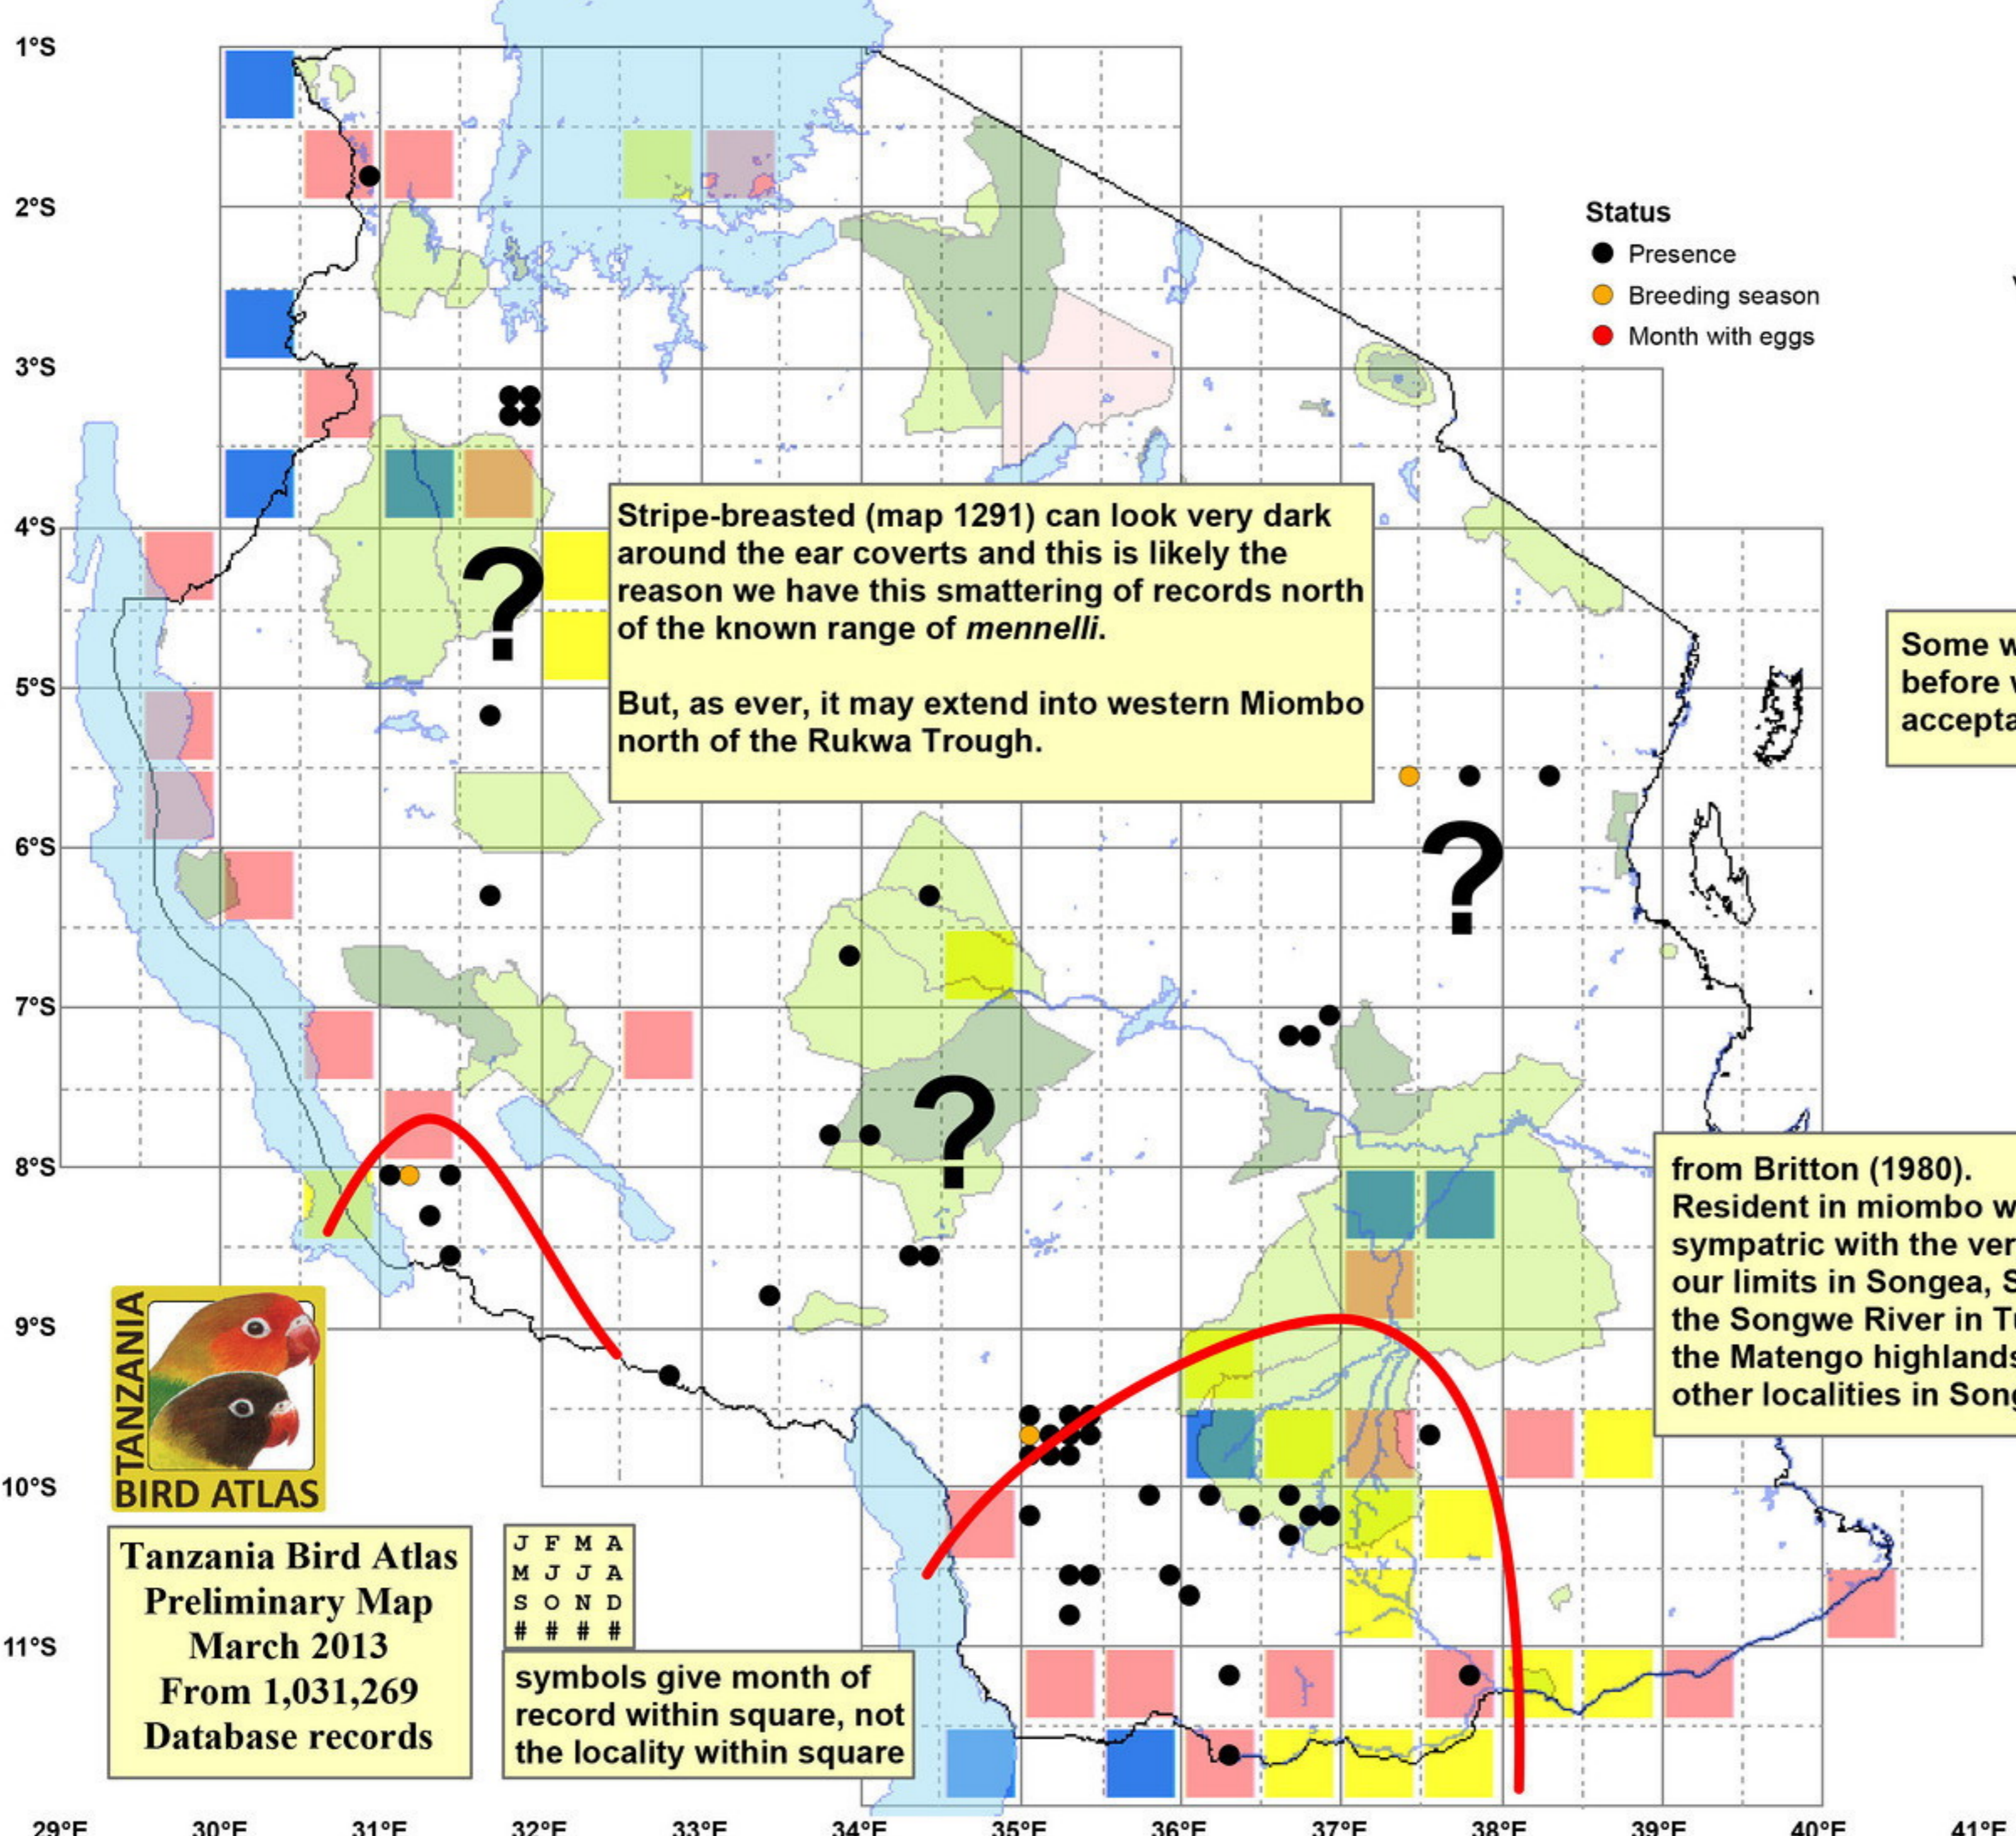

Crithagra mennelli

53 plots from 90 records

Status

- Presence
- Breeding season
- Month with eggs

Virgin Yellow-vented Bulbul squares	9
Single YvB month	16
Two YvB months	24

Stripe-breasted (map 1291) can look very dark around the ear coverts and this is likely the reason we have this smattering of records north of the known range of *mennelli*.
But, as ever, it may extend into western Miombo north of the Rukwa Trough.

Some work to do with these records before we can produce an acceptable seasonality chart.

from Britton (1980). Resident in miombo woodland at 1100-1400 m, broadly sympatric with the very similar *S. reichardi*. It reaches our limits in Songea, SE Tanzania, and possibly along the Songwe River in Tukuyu. There are specimens from the Matengo highlands, and sight records from several other localities in Songea
