

Speckle-throated Woodpecker

Campethera scriptoricauda

99 plots from 150 records

but many older records will have been submitted as Nubian Woodpecker

The confusion between *nubica*, *bennetti* and *scriptoricauda* that has occurred for decades means that some of the peripheral records shown here may well be ID errors. Modern fieldguides are better than older ones but many ? remain unanswered. A specimen from Kilimanjaro would be unthinkable these days with virtually all the suitable woodland along the Pangani Valley and on the foothills of the Pare and Usambara mts long gone.

from Britton (1980). A common bird of drier bushland, bushed grassland and open woodland from sea-level to 2300 m virtually allopatric with *C. bennettii*. The race *pallida* is widespread in coastal Kenya, intergrading with nominate birds in the E plateau from Meru and the N Uaso Nyiro River to Voi and Taveta, and ranging through interior E Tanzania to Morogoro and Songea. The remainder of Kenya and Uganda is occupied by the nominate race which extends to Ngara in NW Tanzania and east of Lake Victoria to NE Tabora, Kilosa and N Iringa. In Tanzania, *bennettii* occurs mainly to the south, east and west of *nubica*, but the distributions and requirements of *nubica* and *C.b. scriptoricauda* in E Tanzania require detailed examination: *scriptoricauda* is regarded as a race of *nubica* by Mackworth-Praed and Grant (1957) and others, and the collection of both at Mt Kilimanjaro on 15 August 1967 is the only evidence of their apparent sympatry.
