

# Northern Red-billed Hornbill

*Tokus erythrorhynchus*

182 georeferenced records

these 3 records need careful checking, could these be the first west of the Rift ?

we strongly suspect that this species DOES NOT occur south of the Kibaya Highlands and that it DOES NOT occur west of the Rift. all records at the periphery of this range require careful checking.

these 3 records will be Ruaha Hornbill

this record may be an entry error. no red-billed hornbills at this altitude on the Mbulu Plateau !

this record requires careful checking. if it is at the base of the Rift it may well be OK.
