

Southern Ground Hornbill

Bucorvus leadbeateri

from 577 geo-referenced records

Virgin Yellow-vented Bulbul squares **7**

Single YvB month **14**

Two YvB months **20**

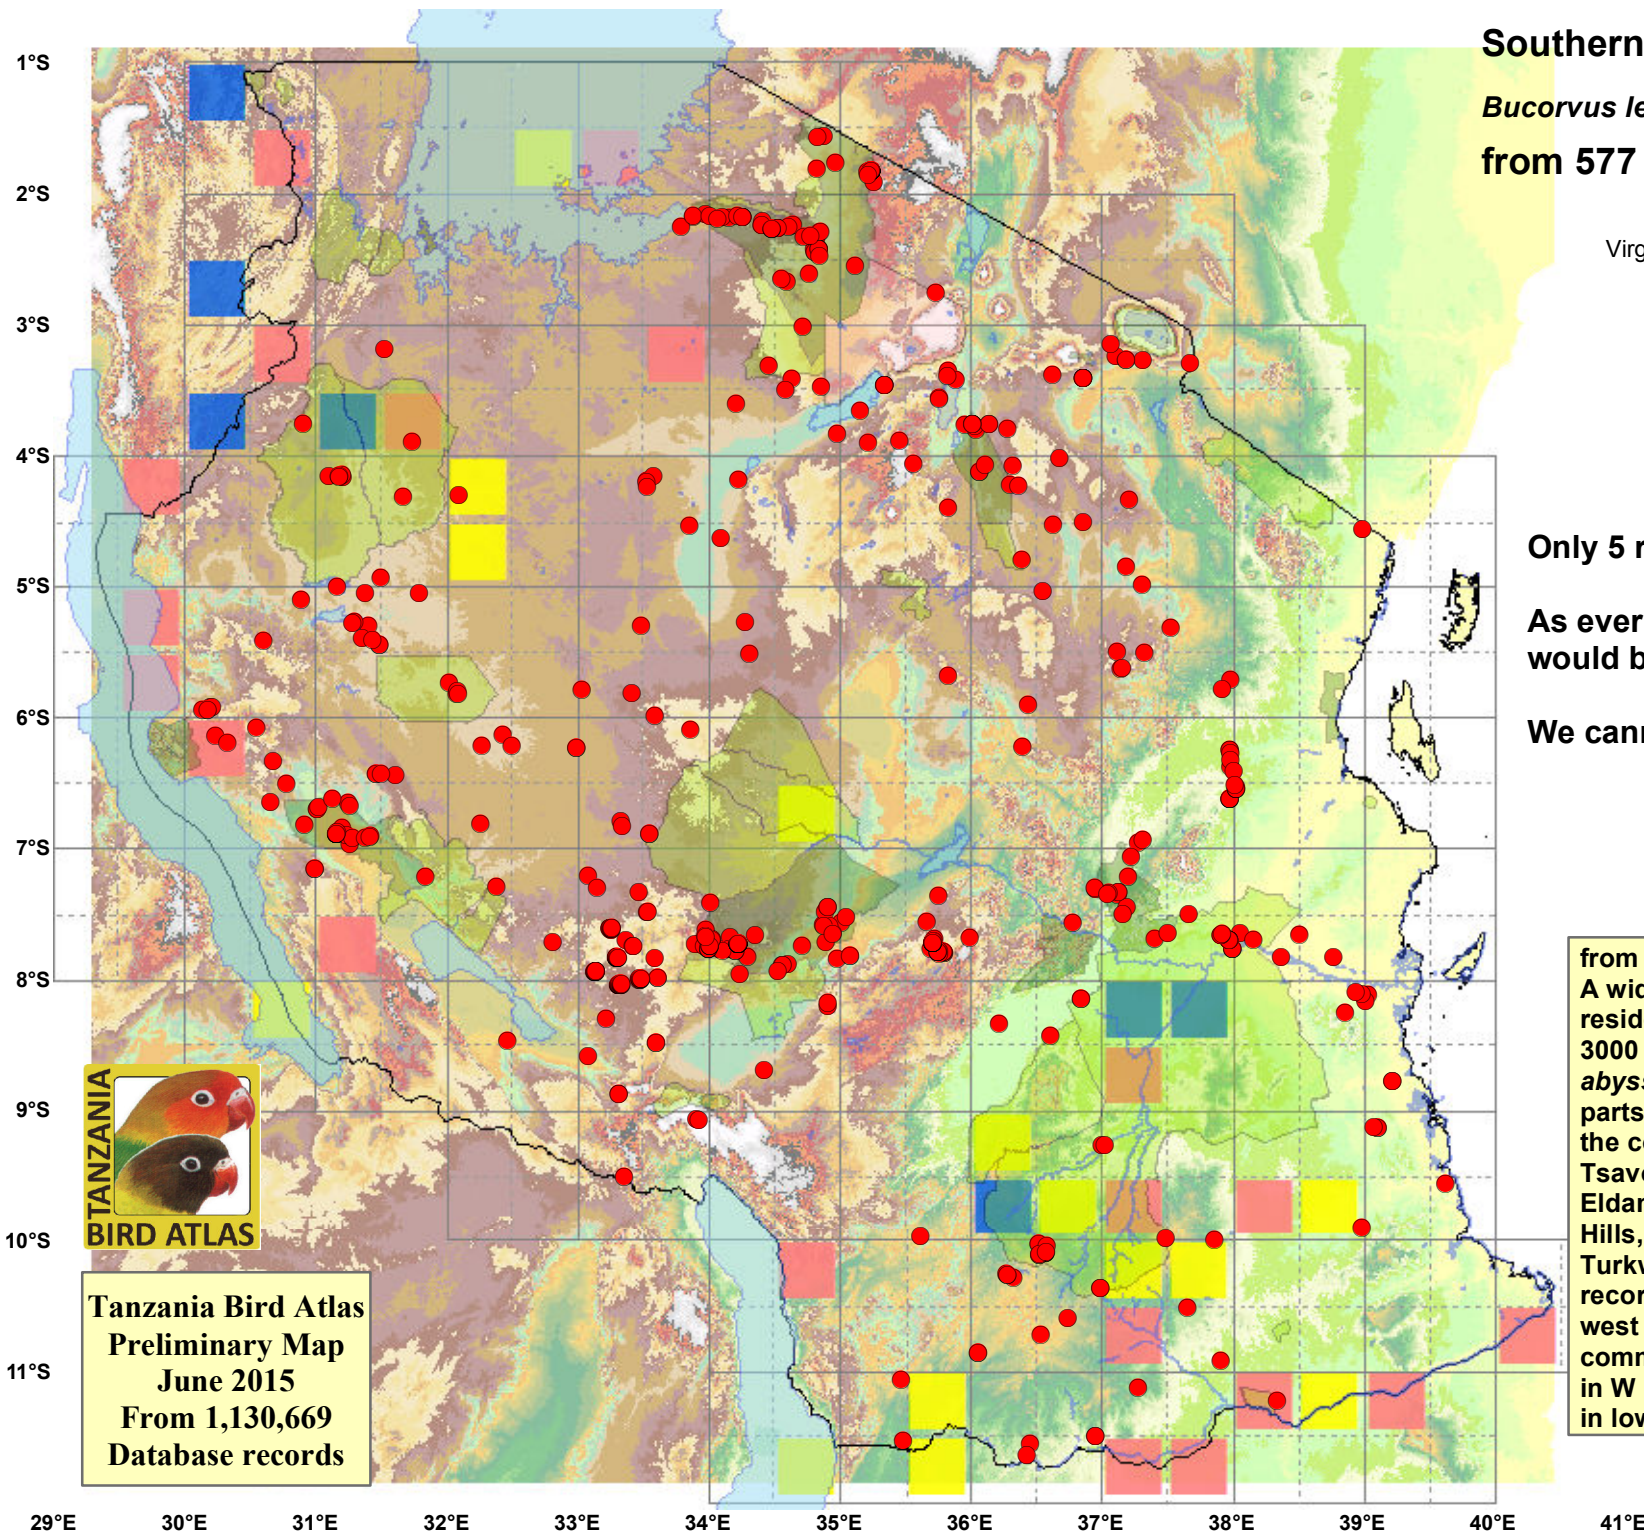

Only 5 records to date above 1900m.

As ever, many more geo records would be very much appreciated.

We cannot have too many !!

from Britton (1980)

A widespread and sometimes common resident and wanderer from sea-level to 3000 m, typically in less arid country than *abyssinicus*. There are records from most parts of Tz though few from West Lake or the coast. In Ke it ranges north to Witu, Tsavo NP (E and W), Embu, Aberdares, Eldama Ravine, Lessos, Eldoret, Nandi Hills, the S. Nandi Forest, Kipsait and the Turkwell River. There are scattered records from the north side of L. Victoria west to near Entebbe, and it is reasonably common in South Nyanza (north to Ahero) in W Ke, but it is no more than a vagrant in lowland areas in between.
